

Is Your Shed Safe?

## Large range of sheds, custom designed and fully engineered in all Colorbond™ colours

### Is Your Shed...ShedSafe? ShedSafe Accredited.

Fielders shed division, Endurance Structures, is proud to announce that we have received official accreditation for our Shed designs by the Australian Steel Institute (ASI), known as ShedSafe. This accreditation is the industry standard benchmark for Steel Sheds sold nationwide.

ShedSafe accreditation, which was launched on 1st November, 2010, began its life after the devastation of Cyclone Larry in 2006. Key learnings out of this catastrophic event included: Observed failures were related to current design standards not being met; Inappropriate design (topography, internal pressure), missing or corroded connections, etc. Cold Formed Structures designed to current design codes performed well. As a result the ASI developed and launched the ASI Steel Shed Design Guide for Portal Frames Sheds and Garages in 2008.

### So what is ShedSafe?

ShedSafe is an accreditation scheme managed by the Australian Steel Institute, designed to assist shed buyers in making an informed purchase decision.

ShedSafe accreditation is your guarantee as a shed buyer that:

- The shed manufacturer has undergone a review by an independent 3rd party.
- This means that, samples of the designs and engineering (plans and structural calculations) used by the shed manufacturer have been subjected to a design check and documentation review process undertaken by an independent 3rd party structural engineer and these have met the ShedSafe accreditation criteria.
- The shed manufacturer has assured their compliance.
- This means that, the shed manufacturer has signed and submitted documentation confirming that all of their shed designs are in accordance with the Australian Steel Institute Design Guide Portal Frame Sheds and Garages (2009).
- The shed reseller will recommend a shed design suitable for your site location and use.
- This means that, the shed reseller has undertaken training and will recommend a shed with a design suitable for your specific site and building use.
- The shed reseller will consider wind loads.
- This means that the shed reseller has undertaken training to determine the correct application of wind loads for your site, based on the information supplied.

**ShedSafe accreditation cannot  
be purchased it has to be earned.**

So when you are looking at purchasing a shed, ensure to check if the manufacturer is accredited....and if they aren't then you have to ask yourself....Why not!!!

Fully compliant ShedSafe accreditation.
